The crypto wallet that'll ♻ earnings

MEVs & Transactions

Since the previous cycles, Ethereum users have been facing two major issues, **MEVs** and high **Gas Fees**.

● MEV Miner Income ● MEV Searcher Income

Let's Break it down

- **MEV Attacks**

Almost every transaction is a possible **victim** of **MEV-Attacks**, these so-called Algorithms/Bots actively analyze all incoming **public transactions** for a possible **profit opportunity**.

- **Public Mempool**

Typically, all broadcasted **transactions** are sent to the **public Mempool** and are **visible**, thus each **transaction** is susceptible to being taken advantage of before getting mined.

So, Solution?

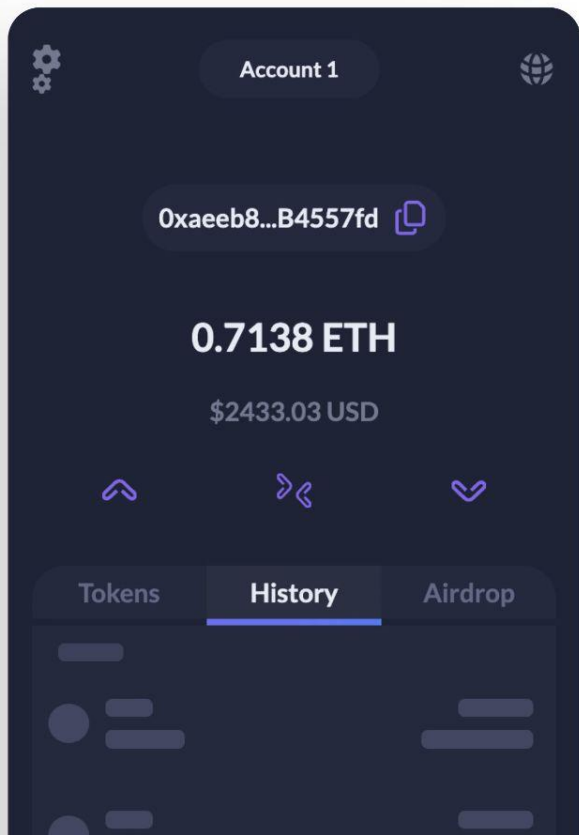

A platform equipped with **MEV Algorithm** that
provides **Private Transactions**.

Why haven't we had this platform before?

Developing an **infrastructure**, supporting **Private Transactions Flow** doesn't require technical expertise, whereas **extensive skills** and a **customized environment** are needed to acquire an **MEV Algorithm**.

**MetaPro has managed to build this co-existing ecosystem
successfully.**

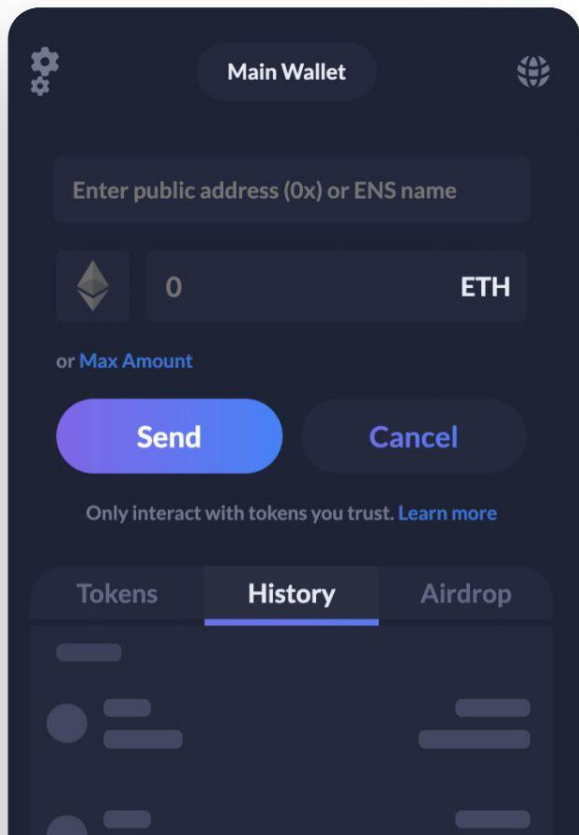

Wallet

MetaPro Ecosystem

- Earn MEV Profit \$PRO
- No-revert Transactions
- Private Transactions
- Gas Optimized Transactions

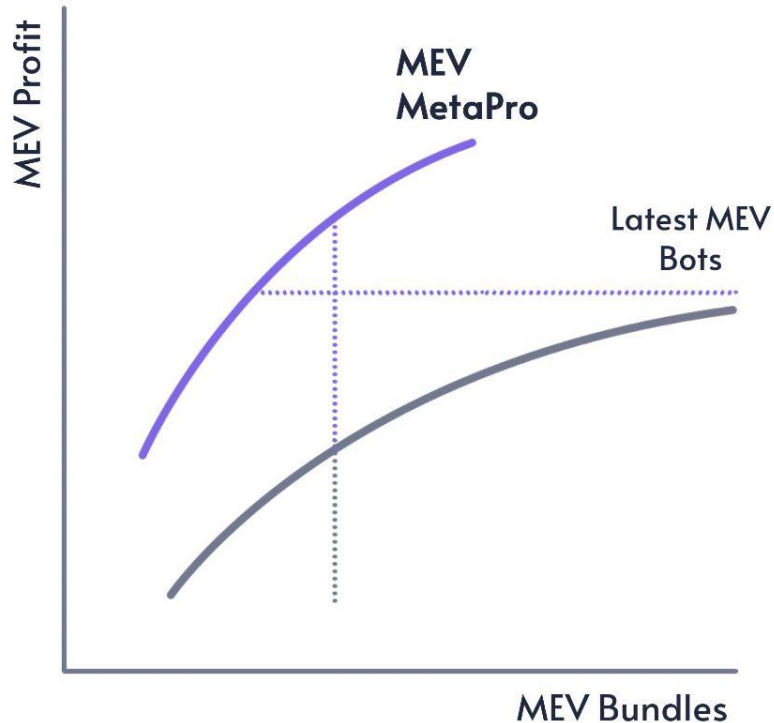

MEV Bot

MetaPro Ecosystem

- Sandwich Attacks (V2/V3)
- Arbitrage Attacks (V2/V3)
- Supports USDC / USDT
- Customized Ethereum Nodes

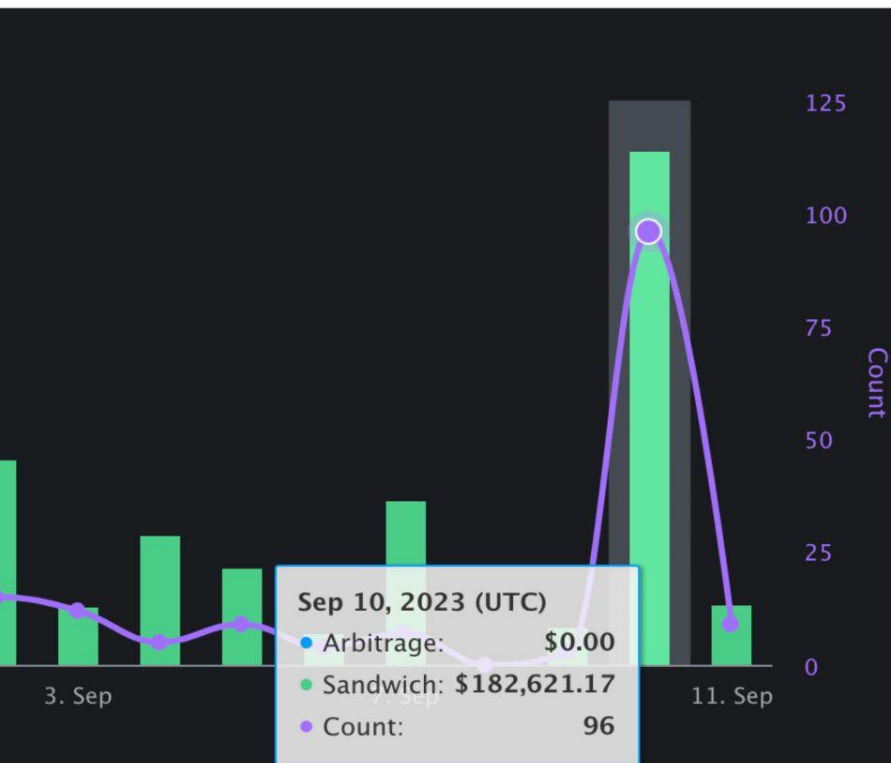

Advantages

Typically, every **MEV Opportunity** occurs under **highly competitive conditions**, with other factors held constant; However, **MetaPro MEV** possesses an **advantage** that other MEV bots lack: the **exclusive Private Transaction Flow** through the **MetaPro Wallet**, which is only visible to MetaPro MEV. This **eliminates a significant portion** of the competition while **protecting users** from MEV attacks.

Statics

\$PRO Utility

All transactions sent via MetaPro Wallet **participated** in our MEV Bundle as a **Back-running transaction** (a bonus to our MEV); Thus, the **user** gets **rewarded** through **\$PRO** based on the **effective** gas spend.

Core Costs

MEV Bot

- Algorithm Maintenance
- Ethereum Nodes (~\$3,000 / Month)
 - Customized AWS Servers
- MEV Holdings (~500 ETH / Total)
 - WETH Balance
 - USDT / USDC Balance
- Tokenomics Advisor

Wallet

- Software Developments
- UI/UX Designers
 - Wallet UI
 - Website UI
 - Marketing Content
- Auditing (~\$120k / Total)
 - Bug Bounties
- Marketing Strategies
